## DETAILED ACTION

### *Priority*

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 1, line 10 describes the substantially smooth friction surface as "without profile". Analogously, line 12 describes the substantially smooth counter friction surface as "without profile." The scope of the claimed invention is confusing because of the term "without profile". Clearly, based on the specification, both the jaws and the counter friction surface have a profile (cylindrical.) The Examiner suggests changing "without profile" to "without a surface pattern" which is supported in the specification on page 4, second paragraph.

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States

Art Unit: 3616

only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Rick (US 6,501,379 B1.) Rick teaches (Figure 8) a device for locking a steering column including a force (68,64) loaded locking member (63,66) and a control device (44, see col. 3, lines 24-29.) configured to adjust the locking member (see col. 3, lines 30-40.) Also taught is a pair of clamping jaws that are without a surface pattern (66,58) and a force generator (60) which exerts a clamping force in the locked position (see col. 3, lines 5-18.)

Regarding claim 2, magnet (62) or oil pressure acts as push the friction surface away from the counter friction surface via piston (63.) Regarding claim 3, the steering column (13) and its associated surface is located between the clamping jaws. Regarding claim 4, the clamping jaw (58) is stationarily mounted to a support (16.)

#### ***Allowable Subject Matter***

6. Claims 5-20 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

#### ***Conclusion***

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Stabler, Rick ('489) Klaiber et al., Wallmichrath, and Yamaguchi teach steering column locking devices of interest.
